HOW I MAKE MONEY

SELLING OPTIONS

A simple, repeatable approach to generate income without staring at charts all day

~2 min	SPX/SPY	Rules-Based
Daily Time	Instruments	Strategy

BY ONE REGULAR PERSON, NOT A HEDGE FUND

⚠ DISCLAIMER

Please read before continuing

Not a Financial Advisor

I'm a regular person sharing my own personal experience. Nothing in this guide should be taken as financial advice. I am not a licensed or registered investment adviser, broker-dealer, or financial analyst, and I do not provide financial, tax, or legal advice or personalized investment recommendations.

Educational Purposes Only

This guide documents what has worked for me personally. Your results may be very different. Every trader's situation is unique. Content referencing specific assets, securities, stocks, options, or other financial instruments is for illustrative purposes only and may not represent actual trades or transactions. No recommendation is made to buy or sell any particular security.

Risk is Real

Options trading involves significant risk. You can and will lose money at some point. Anyone who tells you otherwise is not being honest. Past performance does not guarantee future results. Under no circumstances should any content be construed as a promise or guarantee of any specific outcome.

Do Your Own Research

Always make your own informed decisions. Research platforms, tax implications, and your personal risk tolerance before trading anything. While efforts are made to ensure accuracy, the content may contain errors or omissions. I assume no responsibility or liability for any decisions or actions taken based on the information provided.

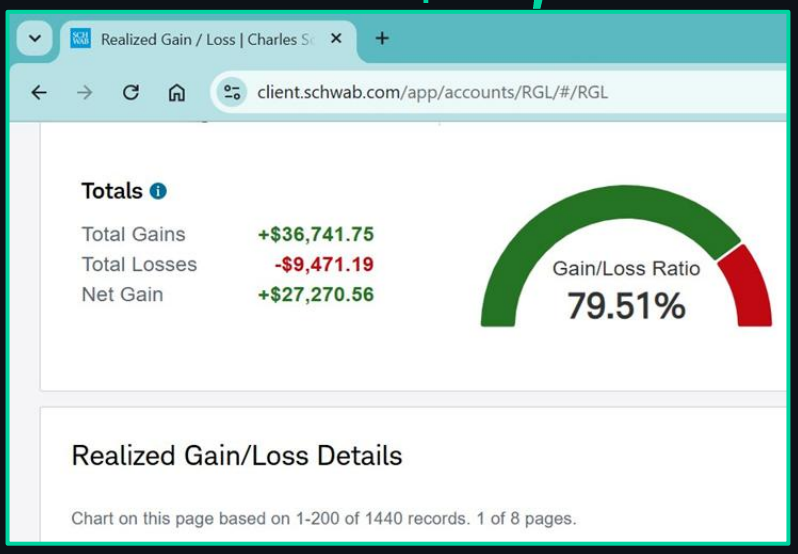

OPTIONS INCOME: MY SCHWAB ACCOUNT

$40,038 in Side Income.

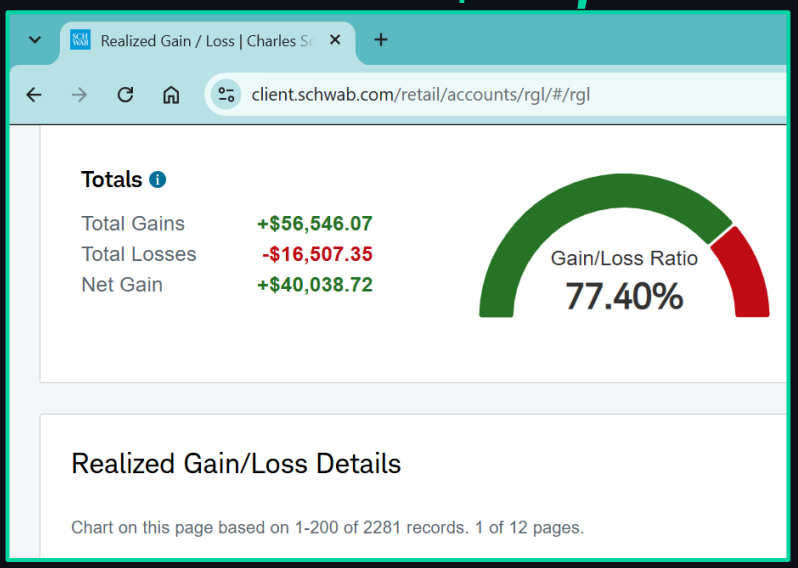

On top of my day job.

From $27,270 in June to $40,038 in October. All from options, about 2 minutes a day.

JUNE 2026 **+$27,270**

OCTOBER 2026 **+$40,038**

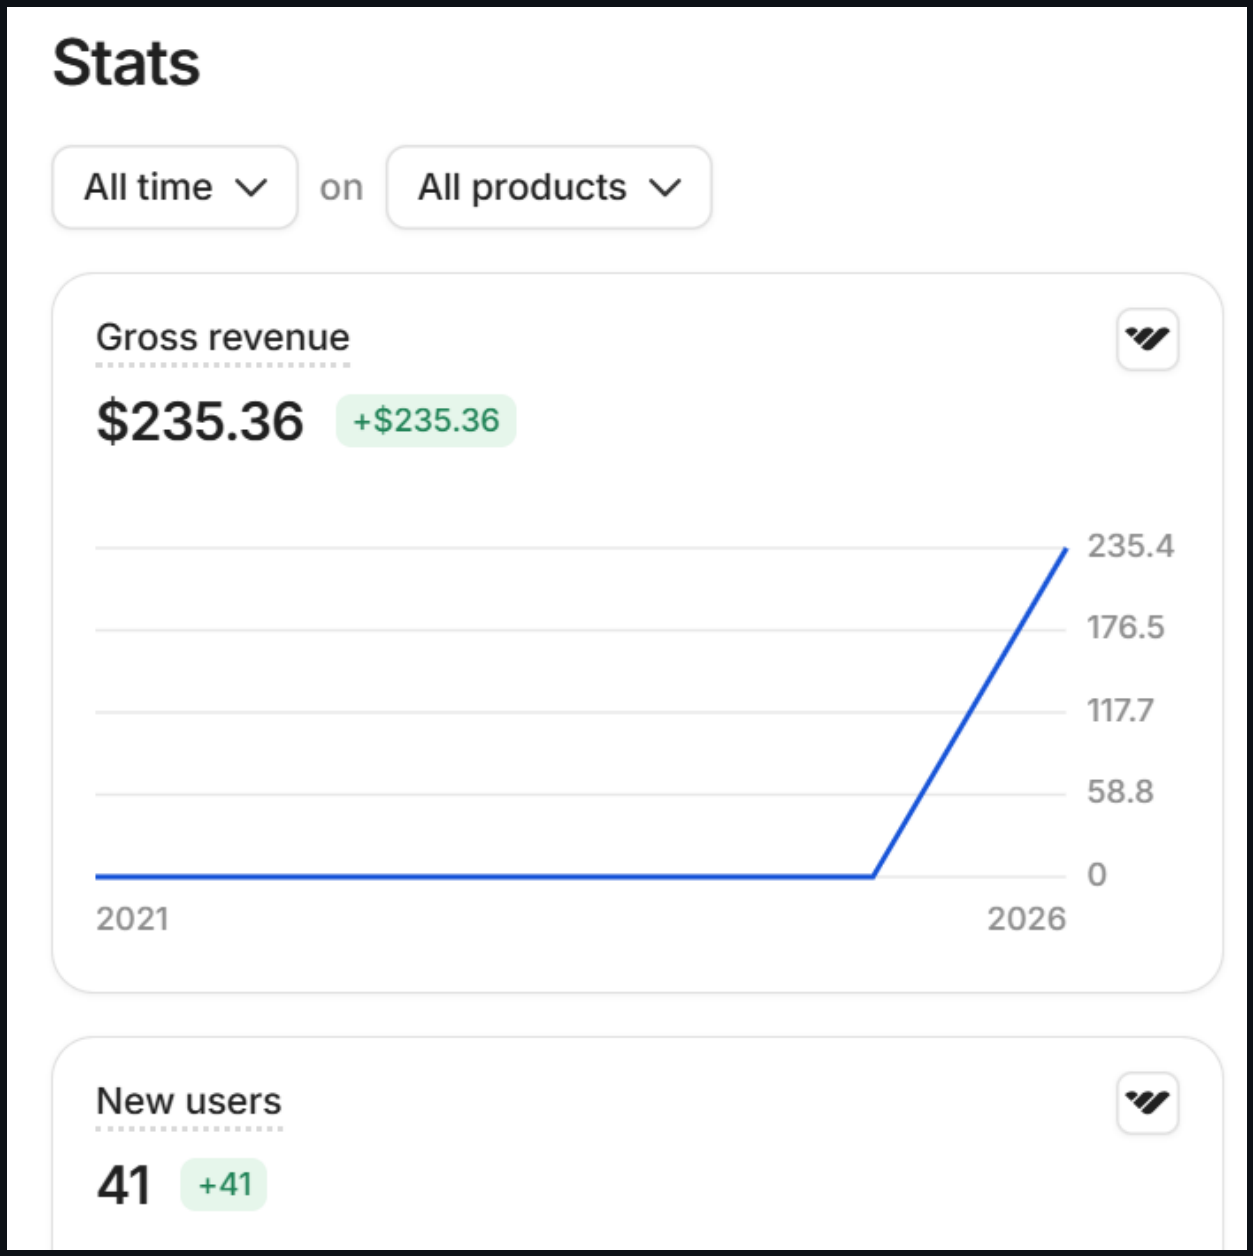

Every day you wait is a day you're not learning this.

Results shown are my own and are not typical. Not financial advice.

WHY I TEACH THIS

I made $235 teaching this.
I'm not here to get rich off you.

41 members. $235 total. That's less than $6 each. I intentionally priced it this way.
My money comes from the market, not from selling content.

People Keep Asking Me...

"Wait, you just made $240 before 9am and you didn't even look at a chart?"

My coworker, watching me check my phone one morning

The Honest Answer:

I'm not doing anything complicated. Most days I spend about 2 minutes placing trades before I leave for work.

~2 MINUTES PER DAY

Here's the Entire Concept

I SELL OPTIONS: Instead of buying options hoping they go up, I sell them and collect money upfront.

BUYING Options

× Pay premium upfront

× Hoping price moves your way

× Time decay works against you

× Most expire worthless

SELLING Options

✓ Collect premium upfront

✓ Profit if price stays in range

✓ Time decay works FOR you

✓ Keep premium if expires worthless

Most of the time, those options expire worthless. And I keep the premium.

My 3-Part System

SPX & SPY

Focus on the most liquid indices. Tight spreads, high volume.

Out-of-the-Money

Sell options away from current price. High probability of expiring worthless.

Stop Loss Always

Every single trade has a pre-set stop. No exceptions. Ever.

04 | THE MENTAL EDGE

Think about it like an Insurance Company

🏠 The Homeowner

- Pays premium every month
- Hopes nothing bad happens
- Loses money if house burns
- Pays claims with no return

🏢 The Insurance Company

- Collects premiums upfront
- Wins when nothing happens
- Has systems to limit losses
- Profitable year after year

I'm not the homeowner. I'm the insurance company.
I collect the premium and hope nothing dramatic happens.
Most of the time, nothing does. And I keep the premium.

Losses Happen.

Here's What Matters.

Anyone who says losses never happen is lying. Or hasn't traded long enough.

Cut Losses Early

Don't let small losers become big losers. A controlled loss is manageable. A runaway trade is not.

Stop Loss on EVERY Trade

Before you enter a trade, you know you're getting out if it goes wrong.

Avoid Catastrophic Trades

One trade should never define your account. Size positions so any single loss is survivable.

Consistency Over Perfection

You don't need to win 100% of trades. Stay in the game long enough for the edge to work.

06 | WHAT THIS IS NOT

Let's Clear Something Up

❌ Watching charts all day waiting for signals	✅ A simple, repeatable daily process
❌ Buying 'lottery ticket' options hoping to 10x	✅ Selling premium and letting time work for you
❌ Following random trade alerts from strangers	✅ Your own trades based on your own understanding
❌ Complicated algorithms or special software	✅ A standard brokerage account and basic setup
❌ Getting rich overnight	✅ Building consistent income over time

07 | WHY I'M SHARING THIS

No Big Team.
No Hidden Agenda.

1

No firm behind me

Just one individual sharing a real approach that generates real results.

2

No team of analysts

It's just me, placing trades in minutes each morning like clockwork.

3

I learned this the hard way

I spent years figuring this out alone. Lost money I didn't have to lose. I made the Discord cheap because I wish someone had just shown me.

4

The system is yours to keep

Once you understand it, you own it forever. No one can take the knowledge away from you. Once you take the red pill, you'll never see the world the same way again.

08 | WHY THIS ISN'T FREE

The Real Cost Isn't the Discord.

The real cost is months of trial and error, blown trades, and expensive lessons figuring this out alone. I already paid that price. You don't have to.

I priced this under $5 on purpose. I want people in, not priced out.

There's Still a Key Difference

👁 Watching What I Do

- Seeing the profits I post
- Knowing ticker & direction
- But not understanding why
- Still guessing on your own

🎓 Understanding How

- Knowing the full setup criteria
- Understanding risk management
- Placing trades confidently
- Building your own edge

Watching won't make you money. Understanding will.

Two Paths Forward

PATH 1 → *The hard path, but valid if you're stubborn*

Figure It Out On Your Own

- Trial and error is expensive
- The market will teach you. Harshly.
- Mistakes cost real money
- Takes years to build an edge
- Most people quit before it clicks

PATH 2 → *The shortcut, for those serious about learning*

Learn a Structured Approach

- Understand exactly how trades are placed
- Learn risk management rules upfront
- Skip the most painful lessons
- Build confidence through understanding
- Start with a clear, repeatable process

10 | TAKE ACTION

Three Ways In

	FREE GUIDE	PREMIUM DISCORD ★ MOST POPULAR	VIDEO COURSE
Price	**Free**	**Under $5**	**$99.99 early-access price, one-time payment** Price goes up as more videos are added
What it is	The overview you're reading right now	The community where I explain the strategy and answer questions	The ultimate strategy, taught on video, start to finish
Best for	Curious and want to see how it works	Want to follow along and ask me directly	You learn best by watching, and want to pause, rewind, and repeat
What you get	The concept, the 3-part system, risk rules, real results	A 10,000+ word breakdown of my one strategy, my trade results (including premium collected on SPY and SPX calls and puts), and direct Q&A with me	**9 videos and 80+ minutes of training available now, with more being added.** A step-by-step walkthrough of how I place my trades, set my stops, and manage risk.
Level of depth	The "what" and "why"	The "what" and "how," with thinkorswim screenshots of each step	The "how" in full, shown on video

Not financial advice. Trading involves risk.

Common Questions, Honest Answers

Q1 Do you guarantee profits?

No. Absolutely not. Anyone who guarantees profits in trading is selling something you should run from.

Q2 How much can I realistically make?

Completely depends on your account size, trading frequency, and discipline. There's no one-size-fits-all number.

Q3 Do you use stop losses on every trade?

Yes, every single trade. This is non-negotiable and is the most important risk management rule I follow.

More Questions, Honest Answers

Q4 What platform do you use?

Thinkorswim (Schwab) is my primary platform. IBKR (Interactive Brokers) is also excellent and highly regarded.

Q5 Is this beginner-friendly?

The concept is simple. But execution requires discipline, real capital, and the ability to handle losses without panic.

Q6 How long until I see results?

Depends on your setup and account. Some see results in weeks; building consistency takes longer. Patience is part of the edge.

This Isn't About Getting Rich Overnight.

It's About Something Better.

Consistency

Showing up with the same process every day, whether the market is up, down, or sideways.

Discipline

Following the rules even when it's uncomfortable. Especially when it's uncomfortable.

Probability

Putting the statistical edge on your side and trusting it to play out over time.

QUICK REFERENCE

The System at a Glance

Instruments

SPX & SPY

Daily Time

~2 minutes

Mindset

Discipline over prediction

Strategy

Sell OTM options

Risk Mgmt

Stop loss every trade

Edge

Time decay (theta)

If that makes sense to you you'll get it.

If not, that's okay too.
The market will still be here.
And so will I.

Thanks for reading.
